

ONETalk

Parramatta Mission is bringing Dr Henry S. Berman to Western Sydney to lead a two day workshop focusing on his specialties in behavioral problems in adolescents, including ADHD, depression, poor school performance and anxiety disorders.

HEADSS / Adolescent Mental Health Revesby Workers Club – Whitlam Theatre April 8th - 9th

We invite you to be a part of this once in a lifetime opportunity.

Dr Henry Berman, joined by local experts, will be presenting a workshop on the HEADSS assessment and important issues involving adolescent mental health. This two day event will bring opportunity for professionals and non-professionals to hear from the best in the sector with the opportunity to network, share, research projects and formulate ideas.

While doing his fellowship in adolescent medicine at Los Angeles Children's Hospital, Eric Cohen, MD, refined a system for organising the psychosocial history that was originally developed in 1972 by Henry Berman, MD. The system, known by the acronym HEADSS, has since been used successfully by adolescent clinics across the world and it is a system used in every headspace site across Australia. This two day event will bring opportunity for professionals and non-professionals to hear from the best in the sector with the opportunity to network, share, research projects and formulate ideas.
